

CompVer Consulting builds, deploys, and operates custom software for organizations in regulated and evidence-sensitive domains. Engagements run diagnostic before constructive: an assessment identifies the constraint capping throughput, a scoped strategy converts it into an estimated build plan, then the firm builds the system and operates it.

CORE COMPETENCIES

Custom application development & modernization

Full-stack design and build, legacy system replacement, data migration, systems integration, API development, multi-tenant SaaS with row-level tenant isolation enforced at the database.

Web & mobile application development

Custom-coded marketing and transactional sites with structured content models, schema markup, payment surfaces and bot mitigation; native iOS and Android via React Native/Expo.

Document intake & workflow automation

Multi-modal document intake and fact extraction with confidence gating and mandatory human approval; electronic forms, document management, case management systems, business process automation.

Healthcare administration systems

Provider credentialing and contracting lifecycle, provider enrollment, primary source verification, payer directory data. HIPAA-scoped operation, PHI handling, BAA-covered subprocessing.

Compliance & trust-framework engineering

Policy corpus development and control mapping to SOC 2 Trust Services Criteria, HITRUST CSF r2, ISO/IEC 27001:2022 Annex A and GDPR Art. 32; gap identification, control implementation, evidence packaging.

Operation of delivered systems

Documented deploy and rollback procedure, centralized error routing, tiered change-authority policy with written promotion criteria, uptime probing and threshold-based alerting.

DIFFERENTIATORS

- **The firm runs what it builds.** Every production system carries documented deploy and rollback procedure, centralized Sentry-to-GitHub error routing across seventeen repositories, and threshold metric alerting — operational practice larger integrators drop at go-live and smaller shops never have.
- **Compliance is native, not retrofitted.** The principal holds direct SOC 2 Type 2 and HITRUST CSF experience and serves as Compliance Officer and Privacy/Security Officer at a healthcare payment integrity company, reporting to its board.
- **A reusable, owned engine.** SmartBox is a patent-pending multi-modal document intake and fact-extraction engine with a confidence gate, mandatory human approval, and a guarantee that every ingested item reaches a defined terminal state rather than failing silently. Deployed across four regulated verticals, it removes build risk and schedule from new work.
- **Senior-only delivery.** No junior bench and no staff placement model — every billed hour is a principal hour.
- **Flexible engagement structure.** Firm-fixed-price, time-and-materials, labor category, retainer, staff augmentation, and subcontracted overflow capacity for other firms and prime contractors.

PAST PERFORMANCE

Face Rock Enterprises PROJECT 956 · REFERENCE CLEARED

Per-clinic, per-engagement margin system for tribal healthcare services across Choctaw, Miccosukee, Osage Nation, Kiowa, Yankton Sioux, Picuris Pueblo and Comanche engagements. Syncs staff, loaded labor rates, time entries and invoices from BigTime, ingests documents the source system never captured, and produces reconciled hours, labor cost, revenue and gross margin.

CC&F THE CREDENTIALER · LAUNCH ORGANIZATION

Multi-tenant provider contracting and credentialing SaaS. Ten-stage contracting lifecycle, automated follow-up cadence, primary source verification, tribal-specific contract template library. Implements all 44 AAAHC CPV verification elements across six external connectors including NPPES, OIG LEIE, NPDB, DEA and OFAC SDN.

Lightwave Electric BEAM PLATFORM · REFERENCE CLEARED

Field-operations platform license covering intake, estimating, job costing, invoicing and payment, scheduling and permitting, plus a lead-to-payment site replacing a manual re-keying process. Expo/React Native, Node/PostgreSQL, Stripe, Twilio.
